Potting bench for Jana

Built this bench out of inexpensive 2x4 lumber (#3) and some extra plywood. Used "Simpson Strong-Tie" brackets to tie it all together. Very sturdy!!

General workbench

Built an 8ft long workbench. Used 2x4 and 2x8 lumber with an Simpson Strong-Tie WBSK workbench kit. Top and bottom shelves are 3/4 CDX plywood. Used pocket holes on the two end

2x8 boards to attach them to the legs with more fasteners. Work surface is topped with plastic green board similar to cutting board for most of the bench. Very strong. Works great for dirty projects.
